

Every market. One gate.

The all-in-one trading app — launch submission

XSTOCKS · TOKENS · PREDICTIONS · BASKETS

THE PROBLEM

Trading is scattered across four apps.

A broker for stocks

Market hours. No crypto.
Cash settles in days.

An exchange for crypto

Tokens only — your
equities live somewhere
else.

A site for predictions

Separate balance,
separate onboarding,
separate tab.

Nothing for narratives

Trading a theme means
building the basket
yourself.

Four balances. Four onboardings. **No single view of what you own.**

Moongate: one app, every market.

xStocks

Tokenized equities —
NVIDIA, Tesla, the S&P,
plus pre-IPO names like
SpaceX & Anthropic
PreStocks.

Tokens

Majors and the long tail,
traded on-chain with live
pricing.

Predictions

Markets on real events, in
the same search as
everything else you trade.

Baskets

Curated, narrative-driven
bundles — bought in one
tap.

✓ Apple Pay & bank onramp

✓ On-chain settlement

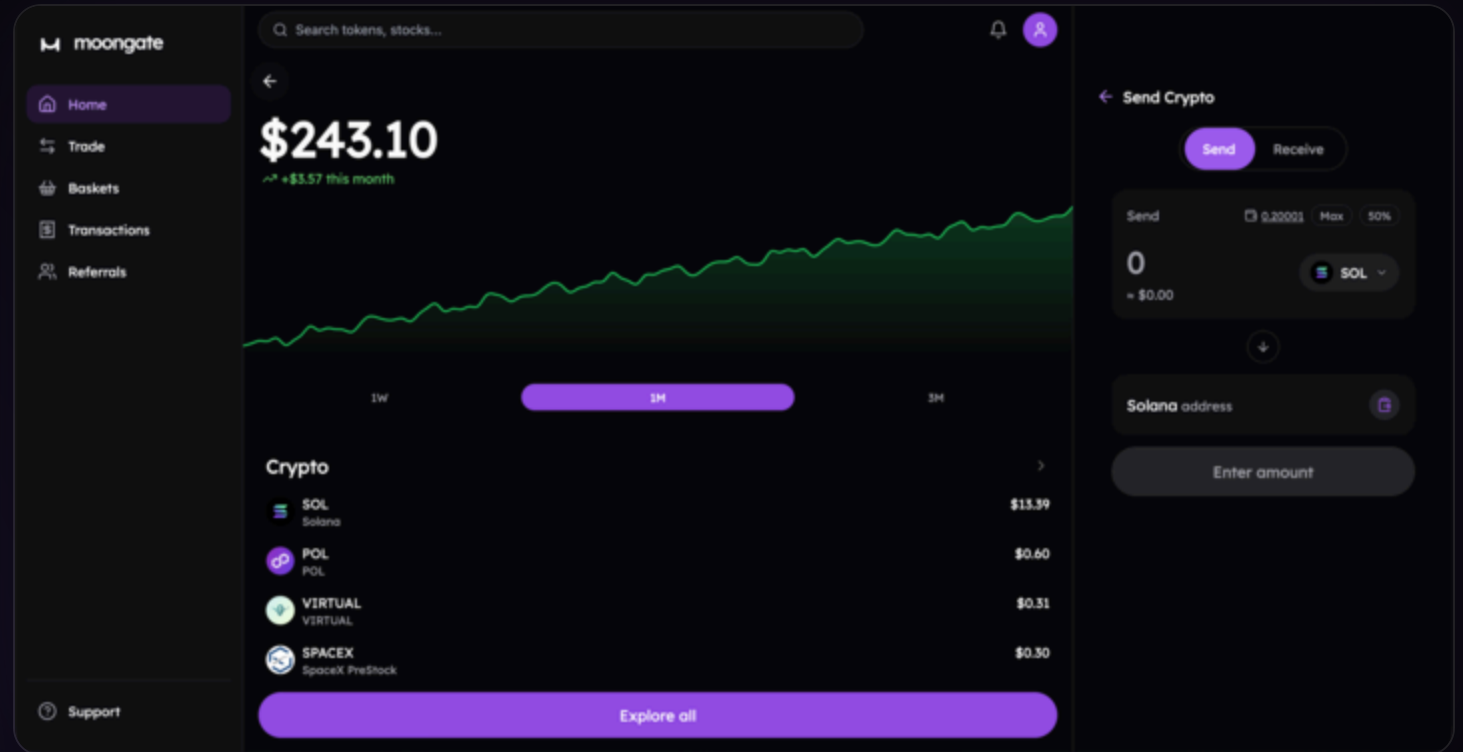

✓ Multi-chain send / receive / swap

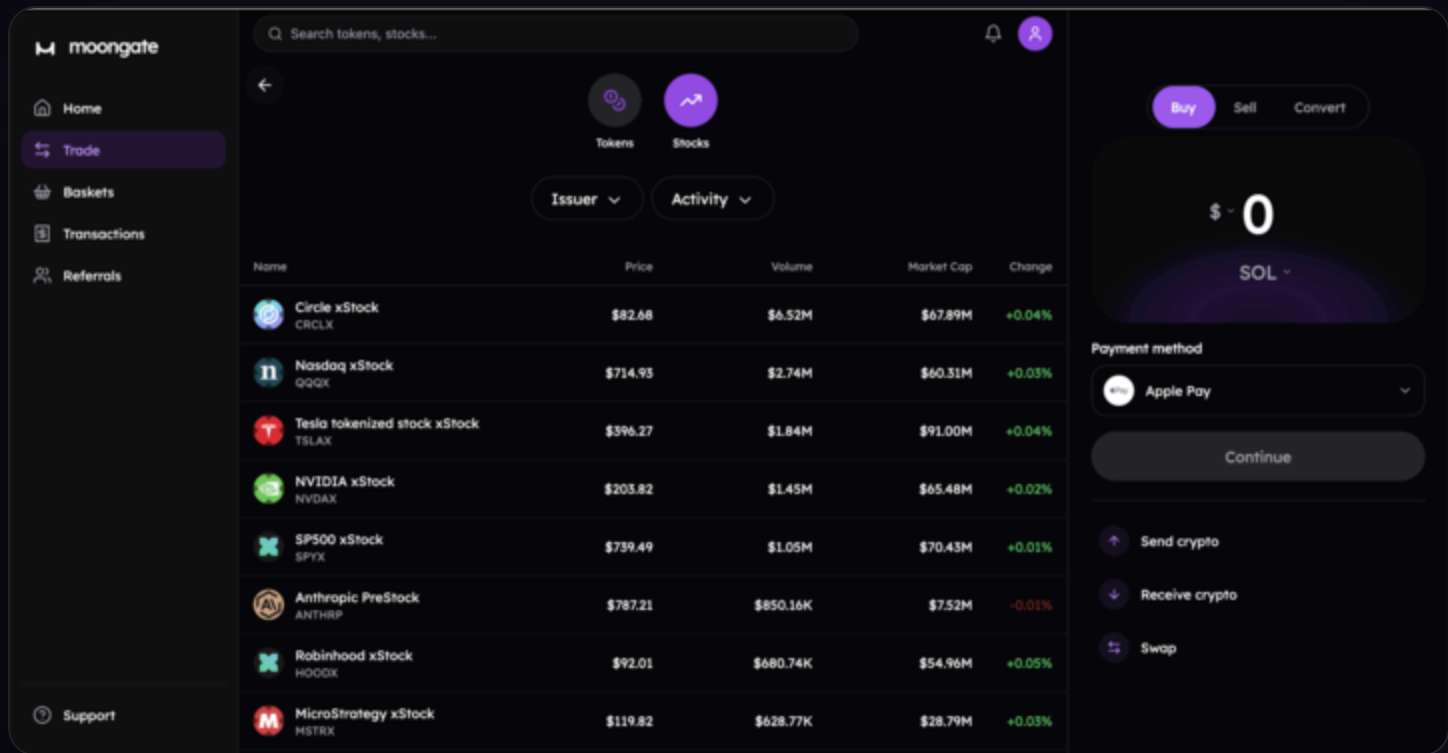

✓ One portfolio view

ONE SCREEN

Your whole portfolio, live.

Crypto, tokenized stocks and baskets side by side — one balance, one chart, one history.

XSTOCKS

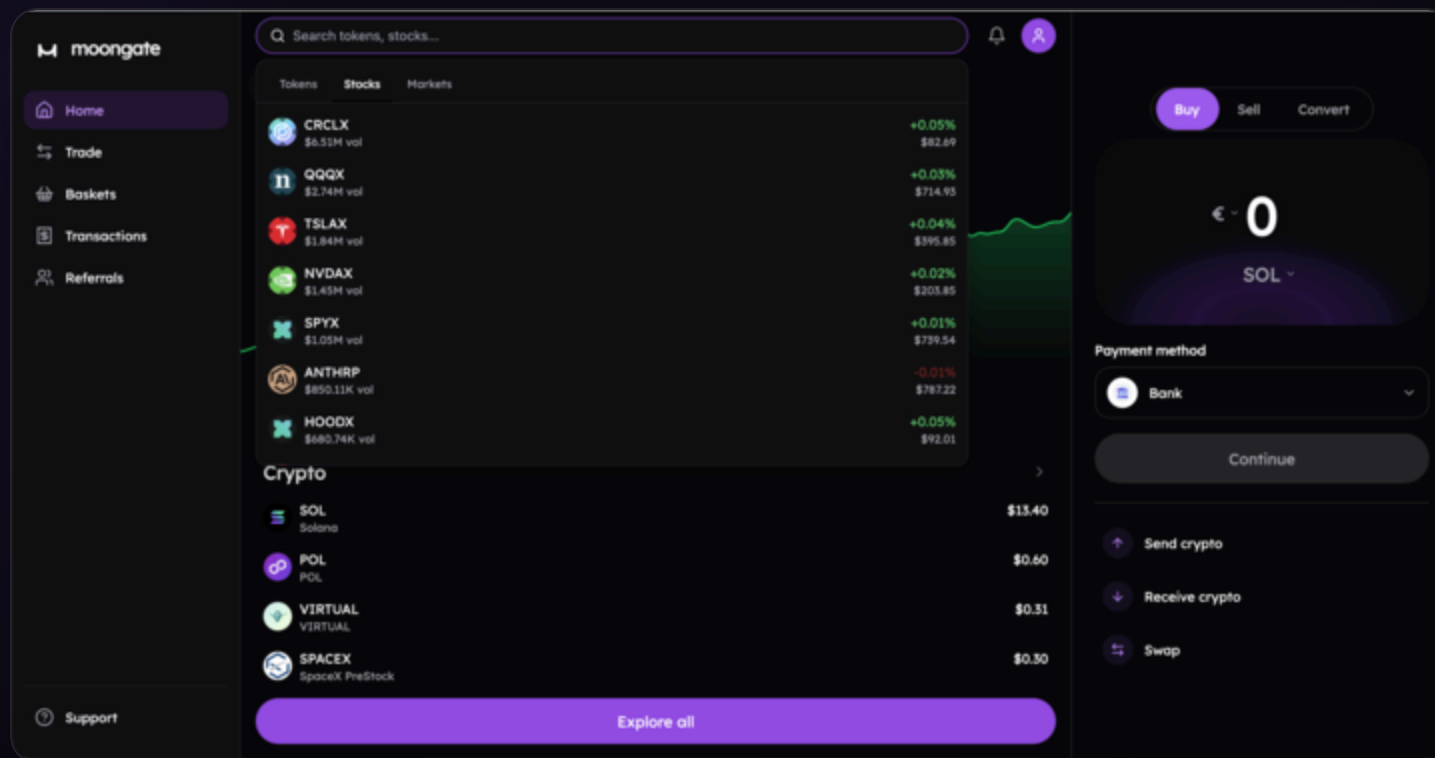

NVIDIA to the Nasdaq, tokenized.

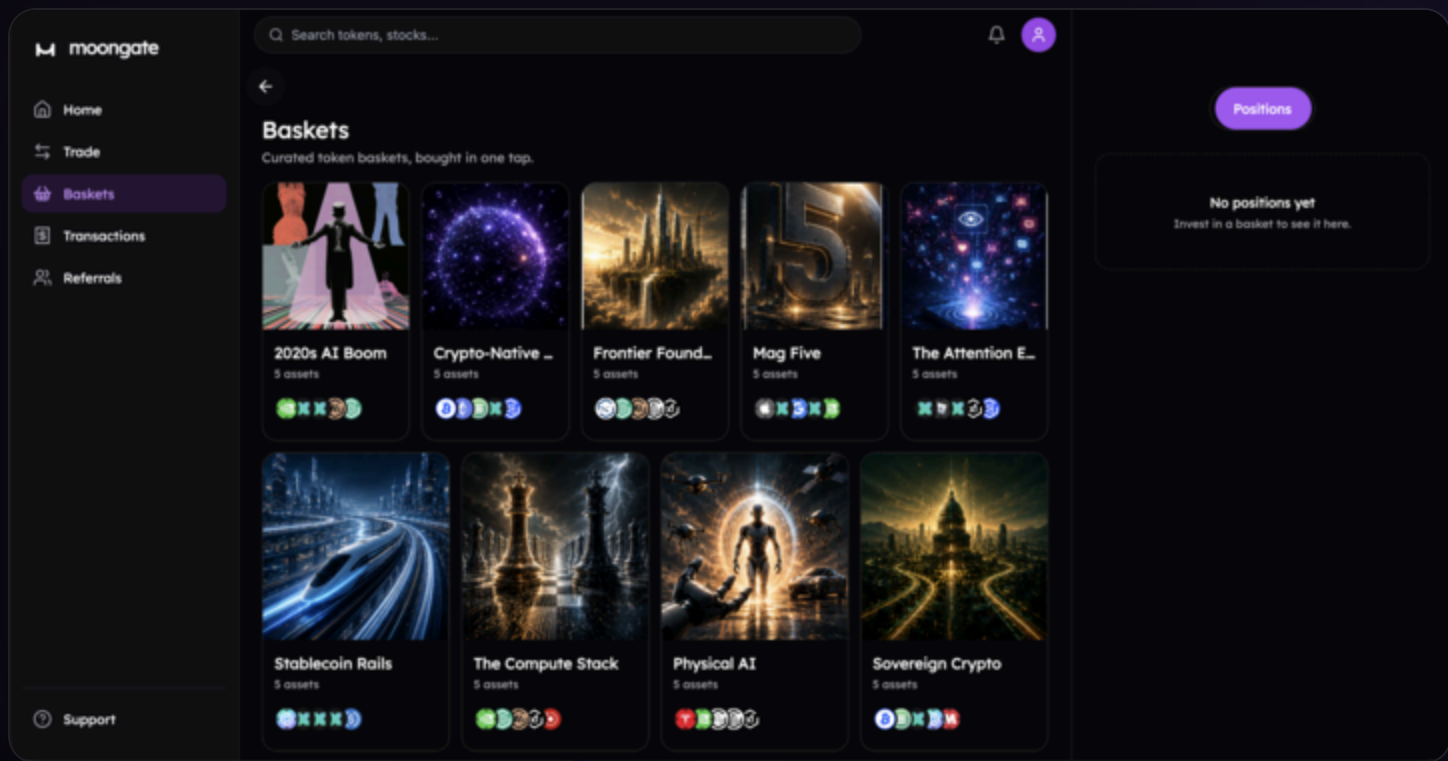

Real-time charts and pricing. Buy with Apple Pay, settle on-chain — including pre-IPO exposure via PreStocks.

EVERYTHING TRADABLE

Tokens, stocks, markets — one search.

Prediction markets live where the portfolio lives: one search bar across every asset class, one tap to a position.

BASKETS

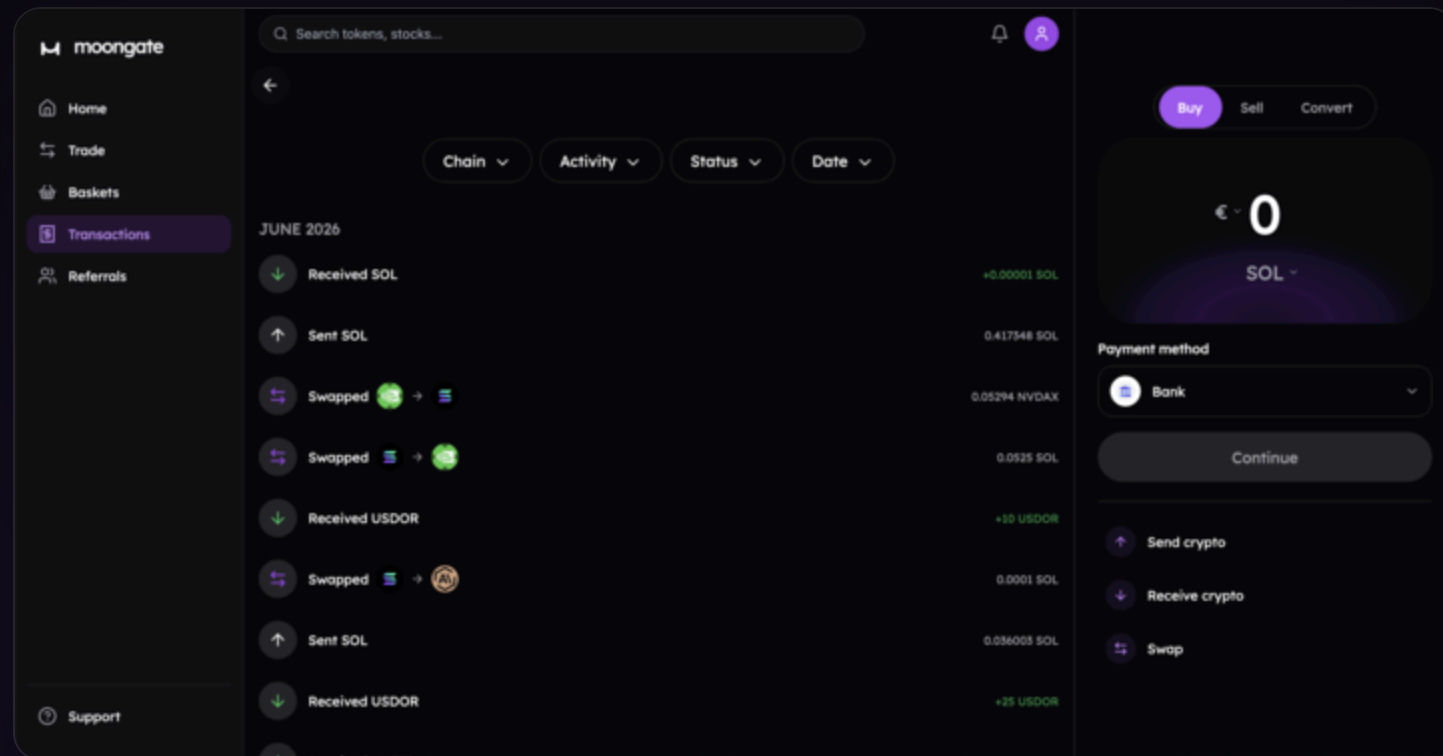

**Trade the narrative,
one tap.**

Curated themes — 2020s AI Boom, Mag Five, Physical AI, Stablecoin Rails, Sovereign Crypto — each a 5-asset bundle bought like a single asset.

THE RAILS

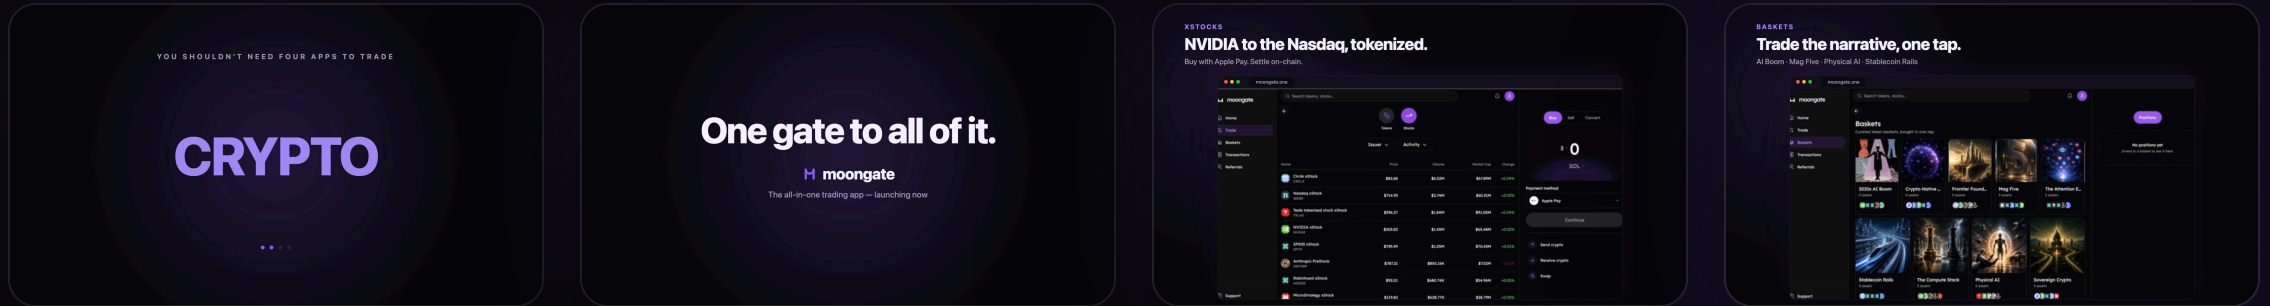

Fiat in, on-chain underneath.

Apple Pay and bank onramps in the buy flow. Send, receive and swap across chains. Every move in one transaction history.

THE LAUNCH CAMPAIGN

A 33-second launch film, rendered from code.

01 Hero film — typographic hook → product → “Every market. One gate.”

02 4 pillar cutdowns (9:16) for social

03 Basket spotlight series, one per narrative

Fully code-generated (Remotion + synthesized score) — every variant is a re-render, localizable in minutes.

Open the gate.
